

Level 4 Data Center

State-of-the-Art Solutions for Critical Business Operations

Whether your business uses network applications throughout the workday or relies on e-commerce 24/7, success in today's business world depends on constant communication and on-demand accessibility. Yocolo's fully-operational, 4,500 sq. ft. Tier IV data center and 365/24/7 live support call center are the backbone of businesses nationwide and around the world.

Utilizing this carrier-grade data center, Yocolo offers a bevy of managed and dedicated hosting solutions, allowing businesses to host their Web sites, e-mail systems, applications and databases on the powerful servers housed within the data center. Furthermore, businesses can house or "co-locate" their own servers within the confines of the facility, enjoying the security, speed and redundancy of the data center's network operations.

From simple e-mail systems to more complex managed backups and systems monitoring, Yocolo is capable of supplementing or replacing the technology departments of any type of business, small or large. We're continuously searching for ways to provide customers with the latest technology necessary to gain a competitive edge in any industry while making it cost-effective for businesses to manage these critical resources.

Yocolo is a business unit of CISP, Inc.

Co-Location

Yocolo's Co-Location services provide users with the rack space needed to house their own server technology and get it connected to the Internet. Ideal for the small business that wants more security, reliability and bandwidth and still wants to maintain, upgrade and make use of its existing equipment. Rent rack space with the highest reliability and uptime, far beyond typical in-house capabilities.

Virtual & Dedicated Servers

Technology changes quickly, and Yocolo's Virtual & Dedicated Servers allow businesses to stay on the leading edge without the expense of buying and upgrading equipment. Work with the latest technology without having to manage upgrades or dedicate resources to a large in-house IT department. Businesses get the speed and reliability they need to access and protect their critical data.

Managed Services

Yocolo's Managed Services provide businesses with an ongoing plan to ensure the integrity of their server-side hardware and software. From managed backups to systems monitoring, Yocolo can serve as an extension of an in-house IT department or provide a comprehensive outsourced solution.

Yocolo Network Operations Center (NOC)

Data integrity is critical for the successful operation of your business. And, as a Level 4 Data Center – the only one of its kind in Northwest Ohio – Yocolo provides security inside and out to ensure your information is always close-at-hand yet far away from the dangers that can cost your business time and money.

Power Supply

- > Dual battery systems simultaneously deliver facility power
- > 2 backup generators feed the battery systems for extended main power outages, with more than 3 days of fuel on site

Climate Control

- > 4 air conditioning units
- > Constant 65°F for peak operating performance
- > Redundant systems are always up and running

Security x 2

- > Two levels of security
- > Level 1: Magnetic key card
- > Level 2: Bio-metric scanners at all NOC entries
- > Security cameras throughout facility

Level 4 Data Center

- > Concrete and steel reinforced walls
- > Secure entry and surveillance
- > Redundant cooling, power and network
- > Data stays safe, secure and always online

Networking

- > Automatically routes traffic to the fastest path to the Internet
- > All 3 Internet routes are diverse
- > All connecting pipes delivered through self-healing fiber

Fire Suppression

- > Ultrasensitive smoke detection
- > Capable of suppressing fires in 10 seconds
- > Waterless system doesn't harm equipment

Key Benefits

Cisco, Microsoft, and Linux Certified Staff On-Site: In-depth knowledge of the most powerful systems is right here in our support center for uninterrupted, peak performance.

Location: Our facility provides Northwest Ohio businesses with secure, remote storage while providing the added peace of mind that your critical data is with a trusted, local provider.

Flexible Solutions: From startups to Fortune 500 companies, Yocolo custom configures systems and managed services to meet the most demanding IT specifications and requirements.

365/24/7 Support: Always on, always available. Your calls and questions are handled by the same local IT professionals who implemented your solution.
